

This is a demo project for literate programming

This file contains a hello world java demo program. It is made up of three components.

First

we want to write a function that print hello world for us.

##Method-1

```
public void print(){
    System.out.println("hello world");
}
```

Next

we want to create a class and put that method(##Method-1) in this class

```
public class myClass{
}
```

In the main function

we want to call this method inside that class

```
public static void main(String args){
    myClass myclass = new myClass();
    myclass.print();
}
```
